## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance:

**Regarding claims 1 and 2**, prior arts do not disclose a method of suppressing a peak of a multi-carrier transmission signal a transmission system where filtering processing is performed on each of base-band signals respectively corresponding plurality frequency channels using a filter, the signals subjected to the filtering processing are each multiplied by a predetermined carrier to be single-carrier signals, and single-carrier signals are combined to obtain multi-carrier transmission signal, comprising a combination of steps:

- (1) combining the signals obtained, and thereby obtaining a multi-carrier signal for use in calculating a correction value for peak suppression;
- (2) detecting an instantaneous peak of the multi-carrier signal for use in calculating the correction value, and based on the detection result, obtaining the correction value for peak suppression; and
- (3) multiplying each of the base-band signals on the regular signal processing route by the correction value to perform correction for peak suppression.

**Regarding claims 3 and 4**, the prior arts do not disclose a multi-carrier transmission signal generating circuit with peak suppressing function, comprising a combination of:

- (1) multiplying each of the signals by a correction value for peak suppression in a multiplier, performing n-time (n is an integer of two or more) interpolation processing on each of the signals multiplied by the correction value;
- (2) obtaining a multi-carrier signal for use in calculating the correction value, detecting an instantaneous peak of the multi-carrier signal for use in calculating the correction value, and

obtaining the correction value for peak suppression based on the detection value to provide to the multiplier in the regular signal processing route.

***Conclusion***
